

DuPont Powder Coatings

# C O I L L POWDER COATINGS

HIGH PERFORMANCE, METER BY METER!

DuPont Powder Coatings

For over 25 years, the development of powder coatings has constantly progressed in order to meet the evolving protection and decoration requirements of diverse metallic items. They have taken a prominent place in the post-forming segment. Their evolution during the last decade has enabled them to conquer market share in the continuous coil coatings sector.

# THERMOSETTING POWDER

# COIL COATINGS

The precoating concept has existed for over 50 years. It is a CONTINUOUS and RELIABLE process, which allows HIGH SPEED COATING (80 to 150 m/min) on flat, clean, chemically treated surfaces.

Precoated products, STEEL or ALUMINIUM, are delivered in COILS, SHEETS, CUT BLANKS, etc.

For many years, only wet paints were suitable.

# NEW GENERATION

# MAIN APPLICATIONS

- Durability, weather resistance, color choice make them attractive for building and architectural market (profiles, cassettes).
- Surface hardness, scratch resistance, smooth or enamel finishes for appliance markets.
- Textures, mat finishes suit the needs of computer or HiFi designers.
- Chemically resistant powders are available, formulated according to customer requirements.

- An extremely flexible coating offering O-T bend.
- A very fast cure time of a few seconds using IR, NIR or INDUCTION cure techniques is possible.
- HIGH SPEED POWDER APPLICATION using cloud chamber application™ technology line speeds in excess of 100 m/min can be attained with very precise coating thickness control between 20 and 100 μ.
- Low speed application is possible using gun or tribo technology.
